Establistment Listing API - Roadmap for Operation and Functionalities

The Establishment Listing API delivers content type Regulated Establishment in JSON format. The content can be filtered by several types of fields that compound that content type.

The complete solution also includes an administrative page that helps the administrator to build the set of parameters that will compound the request for filtering purposes.

API endpoint

`/fsis/api/establishments/v/1`

The complete URL is: https://www.fsis.usda.gov/fsis/api/establishments/v/1

Sample results of an unfiltered request:

API Data Structure:

Data Field	Data Type	Note
establishment_number	text string	
establishment_id	Number	
establishment_name	text string	
address	text string	Street address
city	text string	
state	text string	See Appendix B
zip	text string	
phone	text string	
grant_date	Date	
activities	text string Array	Multiple values in Array, Values are separated using commas (,): “,“
dbas	text string Array	Multiple values in Array, Values are separated using commas (,): “,“
duns_number	text string	
district	text string	District Number, See Appendix C
circuit	text string	
size	text string	See Appendix D
geolocation	Number set	First: latitude Second: longitude
county	text string	
fips_code	text string	
status_regulated_est	text string	status_regulated_est is empty for MPI

Filters and Search:

After the filter is applied, the resulting URL is:

https://www.fsis.usda.gov/fsis/api/establishments/v/1?field_estnumber_value=&field_establishment_id_value=&name=&field_address_address_line1=&field_address_locality=&field_address_administrative_area=All&field_address_postal_code=&field_telephone_value=&field_grant_date_value=&field_activities_value=&field_dbas_value=&field_duns_number_value=&field_district_value=&field_circuit_value=&field_size_value=&field_county_value=&field_fips_code_value=&status_regulated_est_value_1_op=

"field_estnumber_value" for searching text included in "Establishment Number" - 12345 and "field_address_administrative_area" for searching text included in "State" – state abbreviations like AL for Alabama.

All filters not being used also produce parameters in the URL. Like: **field_address_administrative_area=All**. However, they should be ignored. The URL for the API can be built with the parameters with identifiers: **field_address_administrative_area=AL**.

The request to the API would be:

```
/fsis/api/establishments/v/1?field_address_administrative_area=AL
```

The complete URL would be:

https://www.fsis.usda.gov/fsis/api/establishments/v/1?field_address_administrative_area=AL

Active MPI Directory:

MPI Directory data is updated weekly on Monday or Tuesday. Active MPI Directory can be retrieved from this API using parameter: **`status_regulated_est_value_1_op=empty`**:

https://www.fsis.usda.gov/fsis/api/establishments/v/1?status_regulated_est_value_1_op=empty

There is clear URL for it:

https://www.fsis.usda.gov/fsis/api/establishments/mpi
